

ABSTRACT

In a packing member that packs an ink cartridge (1), the packing member is constituted as an adhesive label (21), a perforation is provided on a portion of the label (21), an ink cartridge 1 is packed by adhering the label (21) on the cartridge 1, and the ink cartridge is unpacked by peeling off a central portion of the label (21) along the perforation. A back sheet (release coated paper) of the label (21) is adhered on the ink cartridge in a state in which a portion of the back sheet is left. Thus, unpacking (peeling-off of the label) is facilitated, and adhesive is prevented from remaining.
